

Five or More Reasons Why Advantus[®] and Not the Other Guys

Double the Warranty – Waterous provides a two-year warranty with the Advantus while competitors only offer a one-year warranty.

High Quality Paddle Wheel – The Advantus and Aquis utilize a stainless steel paddle wheel with a carbide shaft while the competitors use plastic.

Direct Connect Diagnostics – A Waterous Service center can connect via a laptop to the system to view operation or to troubleshoot any of the components. The system can also be viewed and changed via a laptop and the internet by one of the technicians at Waterous Arizona.

Leave The B In The Pail – Class B foams last the longest sealed in the pail they were purchased in. The Hydra-Cell pump the Advantus Foam System utilizes will draft. With an A/B selector valve and an off-board pick-up tube the Advantus Foam System can quickly use foam that is left in the pail. The tank space saved can be used for additional water or Class A foam. Also, unlike our competitors, the Hydra-Cell is also able to pump abrasive particles or run dry with out causing damage.

Have Your Foam System Wired Your Way At No Additional Cost – The Advantus Foam System or Aquis Foam Proportioner can be wired to automatically power up with pump engagement or require operator interface to power up the system. This feature is provided at no extra cost.

Accuracy Readings In Tenths – Along with the accuracy that Advantus brings to the table with the use of conductivity, Class A foam used is displayed in tenths of a gallon instead of a figure rounded to the nearest gallon.

Advantus Will Not Leave You Out In The Cold – It takes a little more foam to make quality solution with cold water. Advantus and Aquis utilize a temperature probe to measure water temperature. The Systems will automatically adjust foam for cold water.

Iron Clad Buttons – Instead of rubber housed plastic operator switches the Advantus and Aquis utilize Schurter stainless steel switches.
